

## Commercial

### **Wollaston Golf Club**

Milton, MA

## Profile

- Exclusive, upscale, 120-year-old golf club
- 18-hole course
- No on-course comfort stations or facilities

## Challenge

- Provide remote restroom facilities and shelter from inclement weather
- Preserve greens, fairways and established landscaping
- Maintain upscale image of club
- Eliminate sewage and wastewater discharge

## Solution

- Two strategically placed buildings to house both men's and women's restrooms and provide shelter from sudden unpleasant weather
- Self-contained system is zero-discharge
- Hand sanitizer dispensers installed to remove need for leach field
- Eliminated sewage altogether

## **All Clivus systems are NSF Standard 41 Tested and Certified**

Clivus New England is involved in its projects from pre-conception through the design and installation processes to ensure 100% feasibility. Usage data from the owner is collected for proper system sizing and architectural plans are analyzed to ensure that structures can incorporate the Clivus equipment without undermining building or system designs. Whether it's one composter and one toilet, or several composters and many toilets, Clivus technicians work with contractors and plumbers to guarantee and certify that installations meet the manufacturer's requirements.

Composting takes place in all soils that support plant and animal life. The Clivus systems employ the same process in the controlled environment of the composting chamber. As waste breaks down in the composter a less chemically complex, more chemically stable substance rich in organic matter and very similar to soil is produced. Human waste consisting mostly of water is reduced by over 90%. By-products of the composting process are water vapor and CO<sub>2</sub>, and are released harmlessly into the atmosphere through the ventilation system.
